

# **The Final Countdown – One World Economy**

## **Part 5**

In case you're wondering where Don went last week, he was on vacation, and apparently he went to Washington D.C. And as he was there he went on a tour of the White House and asked to see President Clinton.

Well, a fellow Marine was there on duty and so he quickly informs Don that Bill Clinton is no longer the President, and then he asked Don to please leave, he was bugging him.

So Don goes away. But the next day he comes back to the White House and he asks to see President Clinton again.

So the same marine on duty reminds him that Bill Clinton is not the President, and to please go away.

So Don goes away. However, the next day, Don comes back again, and again the same Marine is on duty.

So Don asks to see President Clinton, and at this the Marine finally lost his patience and yells back at Don, 'WHY DO YOU KEEP COMING HERE ASKING FOR BILL CLINTON? BILL CLINTON IS NOT THE PRESIDENT ANYMORE!!!'

And Don just smiles and says, 'I know, I just like hearing it.'"

And yes, maybe pretty soon hopefully, we can all say that about some other President, but hey, we won't go there will we, but I guess we did! But as you guys can see, the point is this. Don just couldn't get enough of the good news, could he? No siree! But that's right folks, believe it or not, did you know there are some people out there who don't like hearing Good news? And of course the Good News I'm talking about is the Return of

Jesus Christ! And they not only act like it's the bad news, but they scoff at it, and want nothing to do with His offer of salvation. And because of that folks, the Bible is clear. They are running the risk of being left behind and being thrust into the Antichrist's kingdom and you don't want to be there! And that all begins, of course, at the rapture of the Church! And folks, the reason why it's going to be such a **horrible** time is because for those who refuse to accept Jesus Christ as their Personal Lord and Savior they'll be catapulted into the 7-year Tribulation and its not a joke! It's an outpouring of God's wrath on a wicked & rebellious planet. In fact Jesus said in **Matthew 24** it's going to be a "time of greater horror than anything the world has ever seen or will ever see again. And that "unless that time of calamity is shortened, the entire human race will be destroyed." But praise God, God's not only a God of wrath, He's a God of love as well. And **because He loves you and I**, He's given us many warning signs to show us when the Tribulation was near and when Jesus Christ's 2<sup>nd</sup> Coming was rapidly approaching.

Therefore, in order to keep you and I here at Sunrise from experiencing the ultimate bad day of being left behind, even worse than apparently some Presidents never seemingly making it out of office soon enough, we're going to continue in our series **The Final Countdown**. And

so far we've seen how the Prophet Jon has shared with us how the **#10** sign on **The Final Countdown** was **The Jewish People**. The **#9** sign was **Modern Technology**. The **#8** sign was **Worldwide Upheaval**. The **#7** sign was **The Rise of Falsehood**. The **#6** sign was **The Rise of Wickedness**. The **#5** sign was **The Rise of Apostasy**. The **#4** sign was **The Rise of A One World Religion**. The **#3** sign was **The Rise of A One World Government**. And the **last four times** we saw how the **#2** sign was **The Rise of A One World Economy**. And what we saw there was that God lovingly foretold you and I that when we see **all the world's economies** on the planet coming together as one, which is happening right now today all over the world. And we saw that with the **Chronological** proof, the **Fear & Manipulation** proof, the **Quotation** proof, the **Union** proof, the **America** proof, the **Currency** proof, and last time the **Technology** proof, where we saw folks, we not only have a **A One World Economy** and a **One World Electronic Currency**, i.e. we're going Cashless, but for the first time in man's history, but we even have the **Technology** to pull it all together into a Mark of the Beast System. It's called R.F.I.D. and it's being promoted in all sectors of society **right now** for every product, every pet, every person to be tracked and monitored wherever they go, and of course, making financial transactions! And I don't know about you, but I'd say that's a little bit **concerning**, how about you?

But that's not all. The **3<sup>rd</sup> concern** I have with of RFID is **What It's Deployment Will Do**. Folks, believe it or not, once this RFID stuff goes into full force into our society, it will not only become the **biggest prison planet** this world has ever seen, but the Bible says it's a sign you're headed for the **wrath of God!** But don't take my word for it. Let's listen to God's.

**Revelation 16:1-7** "Then I heard a loud voice from the temple saying to the seven angels, 'Go, pour out the seven bowls of God's wrath on the earth.' The first angel went and poured out his bowl on the land, and ugly and painful sores broke out on the people who had the mark of the beast and worshiped his image. The second angel poured out his bowl on the sea, and it turned into blood like that of a dead man, and every living thing in the sea died. The third angel poured out his bowl on the rivers and springs of water, and they became blood.

Then I heard the angel in charge of the waters say: 'You are just in these judgments, you Who are and Who were, the Holy One, because You have so judged; for they have shed the blood of your saints and prophets, and you have given them blood to drink as they deserve.' And I heard the altar respond: 'Yes, Lord God Almighty, true and just are your judgments.'"

In other words, it is perfectly right for God to dish out His wrath on the people's behavior. And notice what that behavior was. They not only killed His prophets and His people, but what was the very first thing mentioned there? These people not only had the audacity to reject Jesus Christ and His offer of salvation, but then they had the audacity to turn around and worship the actual Antichrist instead AND receive "his" Mark of ownership! And that's not only audacious people, hello, it invites God's **judgment!** What'd He do? He Judged them with painful and ugly sores that

broke out on them and He turned all the water into blood. Blood they shed, blood they get, you reap what you sow!

And so here's the point. Once again, how many of you would say if you unfortunately find yourself in the 7-year Tribulation, and if you unfortunately made a foolish mistake of rejecting Jesus Christ as your Lord and Savior, that the last thing you ever want to do, during this time frame, is receive the Mark of the Beast, right? Hello! You talk about going from bad to worse, **real fast!** And folks, here's the point. Once again, whether people realize it or not, for the first time in man's history, we can see how this text is really about ready to come to pass. And that's because, once again, this technology we've saw last week called **R.F.I.D.** is not only the exact same kind of technology Antichrist needs to pull off the Mark of the Beast, to Mark all the people on the whole planet, but as we saw, it's already being **deployed right now** on the planet!

And the **1<sup>st</sup> deployment** they're putting this technology into is in **The Retail Industry**. Folks, let's take a look at this Antichrist world they're creating for us, this Prison Planet system, with this Mark of the Beast Technology, starting with The Retail Industry. That's where it's going into first. And you tell me if it's not leading to a total monitoring society of our worst nightmare! Once again, IBM helps us to envision our future.

## IBM COMMERCIAL: LOST DRIVER

<Tractor trailer slams brakes to stop from hitting a woman at a desk in the middle of the road in the middle of nowhere>

Truck driver <opens door> Can you kindly tell me what your doing in the road?

Woman: I'm with the Help Desk. You're lost. You're headed to Fresno.

Truck driver: Fresno. Right.

Woman: This is the road to Albuquerque.

Truck driver: How did you know we were lost?

Woman: The boxes told me

Truck driver: The boxes?

Woman: RFID radio tags on the cargo. Helps track shipments

Truck driver to other driver: The boxes knew we were lost.

Other driver: Maybe the boxes should drive.

Truck driver: Very funny.

## INVENTORY OFF TRACK? IBM CAN HELP

Yes, IBM can help, help us envision the future where every box on the planet can be tracked with RFID. Folks, believe it or not, this is what they are planning on doing in the Retail Industry. Every box in the entire global supply chain, can be found and tracked, right? “The boxes told me,” right? They’re being track anywhere with RFID. And if you were here last

week, that's not where they're stopping. Their ultimate goal is to not only embed these RFID tags **into** boxes for tracking purposes in the Retail Industry, but even in people and animals for the same tracking purposes. I really believe it's the beginning of the Mark of the Beast System. And as wild as that is, the way they're getting us to buy into this nightmarish scenario, is a step by step plan, to slowly but surely convince us that this really is for our overall good.

And the **1<sup>st</sup> justification** they use is **Hey It's Good for the Companies!** Folks, believe it or not, these companies say that if a product is returned or exchanged with an RFID tag on it, it's for our good because the employees who do the restocking could be told **exactly** where to place the item. I mean, don't you just hate it when you find things in the wrong spot! Oh, there's so much good written all over that! And then they say, since RFID can track and trace anything they're put on, theft rates would drop dramatically and automatically alert management when an item has not been paid for so that should reduce the **cost** for us...yeah right...it goes in their pockets, as by the way, people are being scanned as they leave the store. And then, believe it or not, they even say that RFID in retail could be used to track employees to improve their performance. Yeah! Isn't...that...good! Believe it or not, they admit that store management could verify through an

automated system with RFID, whether or not an **employee** was at the appropriate station at the start of the shift or end of a break allowing them to know if an employee spends excessive time in the break room or is goofing off in a corner somewhere, and if they are, automatically generating a report of this inappropriate behavior. **Total monitoring in the workplace!** Gee, I don't know about you, but that doesn't sound good to me! So much for freedom! Sounds like the beginning of a prison planet system, no matter how much you try to justify it!

But that's not all. The **2<sup>nd</sup> justification** they use to try to get us to go along with this RFID system in Retail is they say that **Hey It's Good for the Consumer!** Yeah, right! Once again, repeat after me...LIAR LIAR PANTS ON FIRE! For instance folks, believe it or not, they say that if RFID is used in the retail industry that this will enable shelves to automatically be monitored to ensure they remain stocked at appropriate levels so that **you** the customer **never miss a sale!** Then they say that if fitting rooms were equipped with RFID readers to identify the merchandise that's brought in, shoppers could see a video in the fitting room describing the features of that item and could see a person modeling it and even suggest accessories to go along with it. Huh? Isn't that be great? You wouldn't even have to try it on anymore! Or, for those of you who like to be more personal with your

clothes, they say the system could also scan the shopper or use pictures of the shopper stored in a database, that they recognize once you came into the store so that you yourself can see what you personally look like in the outfit without changing your clothes! Isn't that convenient! But that's not all. They also say if we just go along with system, it will usher in an era of consumer convenience beyond our wildest dreams, it will be paradise in the store and all of life, like this article shares. Let me visualize what this article says is going to be our soon coming future with RFID!

“It's the near future. You're watching your favorite morning news show to see what's happening in the crazy world of technology but the show is interrupted by commercials. So you think this is a good time for a cup of coffee, when suddenly the face of your girlfriend shows up on the screen telling you to buy the latest model of mp3 player with a miniature hard disk of 1.5 TB and a weight of only 20 grams (suitable for any occasion), offered by Wal-Mart.

But you don't have time to think about that because the next commercial shows your best friend recommending to you the latest car model that's personalized according to the exact wishes you described to a car dealer just a couple days ago.

But now you're getting annoyed to you turn off the TV set, but you forget to disconnect from the Internet so now you hear your girlfriend's voice on the speakers the stereo reminding you that only the best roses can be purchased at Roses.com for her upcoming birthday next week.

But this is interrupted by the doorbell as your friends arrive to take you to a baseball game at the local stadium in which you don't worry about a ticket because they're no longer needed. You just show up and walk in where your presence is automatically recognized by an RFID reader and the cost is automatically debited from your account.

But there's a small crowd at the game, so you decide to move down to the more expensive seats. And as you do, none of the people who paid good money for those better seats are concerned about your behavior because they know what you apparently forgot. The more expensive seat automatically senses your presence too and it promptly sends a signal to the ticket office, which in turn debits your bank account for the difference in price.

So after the game you head home when suddenly the muffler on your car announces, 'I have a leak,' and suggests an appointment with a local mechanic the next day in which you agree.

And since you're hungry you stop off at a convenience store to get a hotdog whereupon a screen pops up on the computer in front of the attendant at the counter that tells him to 'Ask the customer if he would like extra nacho cheesy potato chips.' So the attendant does in which you of course say yes because they're your favorite kind.

So after you drop your buddies off, you head home and upon entering the door your home computer asks you if you'd like to order a pizza in three hours, which happens to be the normal time you eat every night. And since you know you'll be hungry again by then, you say 'yes' and then proceed to take out your garbage.

But as soon as you put the garbage in the garbage can, the can sends you an audible alert telling you that you just put a recyclable item in the wrong bin in which you immediately correct to avoid yet another fine from the waste management company.

But then you decide to wash some clothes before the pizza arrives so you throw your laundry into the machine but an alarm goes off there too as the washing machine informs you to not put your white dress shirt in with your red T-shirt and just in case you don't comply, it deactivates itself until you do.

So later that night, after you finished the pizza that arrived right on time, you go to the refrigerator to get a drink of water when it informs you that you're out of milk and then asks you if you want to order more from the grocery store in which you yawn and say yes and then promptly head off to bed.

Are you hallucinating? Is this a bad scenario of a poor science fiction movie? No! Welcome to the wonderful world of RFID where we know everything about how to serve our favorite customer.”

Huh? Isn't that good for us! Excuse me? I don't know about you guys, but that RFID envisioned future is just a little too creepy for me, how about you? Talk about a total monitoring control society! But it gets even worse! No matter how they try to justify it folks, it's going to lead to a whole bunch of privacy problems!

And the **1<sup>st</sup> privacy problem** it's going to lead to is **Personalized Pricing**. Folks, as wacky as you've seen it so far, believe it or not, these guys are actually planning on implementing what's called a **personalized pricing system** that's designed to monitor our “income” and “spending habits” just to squeeze out even more of our cash! And they're blunt about it! They even call it, “the “Personalized Pricing Tool.” And believe it or not, in the RFID enabled system, they will classify us whether or not we're a “Barnacle” or a “bottom feeder” where they admit, “If we're not dropping big money in their stores, they don't want us around and we will be **financially penalized**. In other words, we get a **higher price** to get us out of their store! Don't believe me? Listen to how Marty Abrams, he's a policy advisor for Hunton & Williams law firm, listen to how he describes how marketers are planning on doing just that with RFID.

He says, “You know that awful feeling you get when you sit next to a guy who paid \$100 for the same flight that cost you \$600 to board? Soon you could have the same experience with food, clothing, and even children’s toys every time you shop.

Imagine approaching a shelf and seeing the price tag change before your very eyes, flashing you a personalized price tailored to your shopping history and profitability to the store.

It’s called ‘Customer Specific Pricing’ and RFID could make it a reality.”

Excuse me? Talk about discrimination! And believe it or not folks, they’re already working on these “electronic price tags” that change before our very eyes! Check out this promotional video that exposes just that!

Future Store:

A virtual tour of the Future Store. Shows a touch screen LCD tv on the shopping cart displaying personal shopping list, position on where you are located in the store and where exactly you have to go to find your item on the shelf.

Store displays prices of items via Electronic Shelf Labeling then flashes a special offer, displaying a now lower price in "real time". Future check out involves pushing cart to the walk through scanner where good and prices are registered automatically and all at once and thereby checkout takes only seconds without having to unload your cart.”

Huh? Isn’t that convenient? All automatic, all electronic, no money transacted, in order to buy or sell. And did you notice the “electronic smart shelf” that automatically changed her price as she approached? Now of course, as you saw, **her price went down** because she’s not a “bottom feeder” like the rest of us, and they want here to stay in the store! **She’s got**

**big bucks!** Folks, that's not only discriminatory, it's freaky, and it's a privacy problem!

But that's not all. The **2<sup>nd</sup> privacy problem** is it's going to lead to **Personalized Tracking**. Like you saw with the lady in the store there. And again, if you were here last week, we saw how these guys really are planning, including the government, "To track us as we move through retail stores, airports, train stations, elevators, libraries, theaters and even public restrooms." It's literally everywhere! And believe it or not, that includes your **home!** I'm not making this up folks, they actually plan on putting what's called RFID Sniffers in your house, so that no matter where you are, they'll know everything about you, that's right, their favorite customer! Don't believe me? Check out the **patents**, once again, they've already filed for!

Believe it there's an actual patent out called the "Inventory & Location System" that describes how RFID readers could be installed in your home's doorways, floors, closets, and even your car to inventory all your RFID retail items and report their findings on a minute-by-minute basis back to the marketers.

Don't believe me? Listen to the patent for yourself. "As a customer enters the door of his residence, a sniffer placed on the floor near the doorway detects the new RFID tagged purchase. This wireless sniffer automatically and continuously emits a signal that searches for an RFID label which it has never seen before. The user's house may contain many sniffers, which all wirelessly communicate with a personal computer. A mobile sniffer could even be installed in the user's car and would be able to report new purchases

as the car enters the driveway or garage so retailers and suppliers can analyze their sales and marketing strategies.”

Now wait a second. How could they do that unless the RFID tags were still left on or we're somehow still readable after the point of sale?

Oh, but that's not all. The 2<sup>nd</sup> way they plan on personally tracking us is with “Sniffers” in the Trash. Believe it or not, companies are also planning on using RFID in retail to continually track, monitor, and market us by the contents of our trash from vehicles equipped with RFID readers that scan for tags as they drive by!

For instance, BellSouth has a patent out for a device called, “System and Method for Utilizing RF Tags to Collect Data Concerning Post-Consumer Products” whereupon they can collect, sort, process, and sell the data contained in our trash with RFID tags on them. They say, “By combining captured pre-consumer information with post-consumption information the entire life cycle of an item may be tracked. This information may be useful to any number of entities, including retailers, manufacturers, distributors and the like. Grocery stores, pharmacies and retailers may find it useful to know how long it takes a particular item to go from being stocked on the shelf to being placed in a waste or recycling receptacle.”

Now wait a second. How could they track an item from the store to the trash unless of course the RFID tags were still left on or were still somehow readable after the point of sale?

Oh but that's still not all! The 3<sup>rd</sup> way they plan on tracking us is with “Sniffers” Everywhere! Believe it or not, companies are also planning on using RFID in retail to continually track, monitor, and market us by turning the whole world into one giant RFID enabled shopping mall that they call the “Real-World Showroom.” Don't believe me? Watch this idea in action in the next video clip

### Real World Showroom

Imagine if the entire world was your personal showroom. Where you see products in use and you can buy them right there, right away. With the advent of inexpensive radio frequency identification or RFID tags and the ubiquity of mobile devices, the gap between where we use products and

where we buy them begins to disappear.

Joe Tobolski: Accenture, our research has developed a prototype called Real World Showroom. Using wireless PDA, equipped with an RFID reader, I can query everyday objects around me such as a tie my friend is wearing.

Information about the product, such as pricing, availability and delivery options is retrieved from a variety of online sources. Click a few options and the tie is yours.

Tobolski: As these ties become pervasive, products will advertise themselves and their product owners will become sales channels. For instance, if I buy a friend's tie, he can receive a sales commission for that sale.

But real world showroom is more than a shopping tool. It's a way to find out everything about a product. By scanning a data tag on a used car, for instance, you can see if it's been involved in an accident, how many times it's been sold, or get a certified odometer reading. Scan a stereo and you can see its supply chain history to make sure it's not a grey market item.

Tobolski: Real World Showroom is an example of what we at Accenture like to call silent commerce. In the future, more and more commerce will be conducted between people in real time and in real world situations, not just at the store or on the web.”

In other words, the whole world became a giant shopping mall. Isn't that awesome! Excuse me? And again, how could they do that unless the RFID tags were left on after the point of sale, of all products in the Retail Industry? Oh yeah! That's right! Repeat after me.. LIAR LIAR PANTS ON FIRE! And folks, it's precisely because of these privacy issues that “privacy advocates” are warning us that we are headed for one of the worst invasions of privacy in the history of mankind, if we allow this to continue.

## High Tech Tracking:

Now to the latest front in the invasion of privacy. We take the debate to the edge of the newest technology.

Ann Cavoukian <Ontario Privacy Commission> :The inter-telecommunications technology, cellphones, all these technologies have the capability of tracking your activities, your whereabouts, your movements and placing you at certain places at times. So surveillance is expanding dramatically.

We all know we are watched pretty much everywhere we go. Maybe it's worth it for a safer city. But is it worth it for more convenient shopping? Because in this digital age, every time money changes hands, we already leave a little piece of our digital DNA. Numbers that tell a story of who we are, what we are like. But what's the next step? And now we're in a world where everything we buy-the clothes on your back, to a bottle of cough syrup can be tracked where ever it goes. Well, imagine no more because that technolog is already here. In the near future, this chip will be imbedded in every product you buy, storing product information and locating it at an exact time and place. From manufacturing, to distribution, to the retail store.

Paul Heino <CEO of Sundix>: It's a chip that replaces barcodes. You put a chip on an item, and then you go about your normal business. Loading it onto trucks or passing it onto your shelves, and every time it moves past an antennae it gets scanned regardless of orientation.

The information control benefit is obvious, real-time updates on what's selling, what isn't. That's why these executives from around the world are so excited.

Heino: Through the old supply chain, you're going to see a 20% savings in labor. You're going to see an 80% reduction in theft.

But here's the potential problem. When you bring it home, because the chip doesn't ever really stop transmitting information.

Cavoukian: The ability to track and individual consumer, with the variety of products that they've purchased and you really aggregate that information

and you build profiles on the kind of purchases that individual has made it grows exponentially.

RFID is now being adopted by Wal-Mart.

Cavoukian: You go into a lingerie store, you go into an economy store, you can paint a picture and then link that to the kind of position I might have as a public official or a school teacher or there could be enormous abuses of that information.

Of course, there is another side to this story.

Heino: Think about tagging pets and getting your dog back even though there's no collar. Think about lost children.

You're child's movements can be tracked minute by minute in a world where scanners are everywhere. Perhaps that's privacy worth giving up.”

I don't think so! But did you catch that? That's convenient! First you can use it on **products** and then apparently it's a natural slide to put these **in what?** You're **pets** and your **children** to track us wherever we go. Gee, where have I heard that? Oh yeah! That's right! That's the Mark of the Beast technology that the Bible said would come when you are living in the Last Days...**it's already here being implemented!**

And so folks, once again, here's the point. What more does God have to do? This is not a game! This is real! God doesn't want us going into the Antichrist's Kingdom or the 7-year Tribulation and He certainly doesn't want us to go into HELL! And so this is why, out of love, He's given us these signs of a **One World Economy a Cashless Society** and again with

this new **Technology** called **RFID** to show us that the Tribulation is near, Christ's 2<sup>nd</sup> Coming is rapidly approaching. And that's why Jesus Himself said:

**Luke 21:28** "When these things begin to take place, stand up and lift up your heads, because your redemption is drawing near."

People, like it or not, we are headed for **The Final Countdown**. And so the point is this. If you're a Christian here today it's time to get busy! We've got to lay aside our differences and start getting busy working together saving souls by the Spirit of God! Amen? Let's be God's team not the enemy's team!

But if you're here today and you're not a Christian, then I beg you, please, heed the signs...heed the warnings...give your life to Jesus now, because the last place you ever want to be is in the **Antichrist's Kingdom**. Folks, that CHIP really is coming, **for people** and it's going to be your absolute worst nightmare! And so the point is, if God is tugging at your heart today, you need to respond now! Don't run from the truth! Don't deny it! Don't act like it's the same ol' same ol'. How much more evidence do you need? In fact, the Bible says that this refusal to admit the truth and act like things are going on like it's always been, would be commonplace in the last days, just like it was with Noah.

**Matthew 24:37-39** “As it was in the days of Noah, so it will be at the coming of the Son of Man. For in the days before the flood, people were eating and drinking, marrying and giving in marriage, up to the day Noah entered the ark; and they knew nothing about what would happen until the flood came and took them all away. That is how it will be at the coming of the Son of Man.”

In other words, I hope you're not one of those who people are too busy partying and acting like nothing will ever change, ignoring the truth all around you, that we're living in the Last Days! Because the Bible says, if you are, you might wake up one day **too late** and discover that you've been left behind. Just like the days of Noah, I warn you today, if you're not saved, you better get saved now! You better get in the boat before it starts to rain!

Amen?

---

To find the way to God, to understand the *truth* of God's Word, and to received the gift of eternal *life*, begin by repentance and faith through a prayer like this:

“Dear God, I understand that I have broken Your Law and sinned against You. Please forgive my sins. Thank You that Jesus suffered on the cross in my place. I now place my trust in Him as My Savior and Lord. In Jesus' name I pray. Amen.”

---
